

Pricing & Go-To-Market Plan

The complete commercial pack: subscription tiers, hospital licensing, AI cost economics, the Founding-Doctor launch offer, and the growth strategy, for the Sales & Marketing team.

Version 7 · 17 August 2026 · India (INR)

Confidential - internal Sales & Marketing use. Prices marked  are tunable before launch.

How StewardMD is priced

Free where it is cheap and habit-forming. Paid where it costs us money or scales to a team.

Deterministic tools (reasoning engine, drug safety, calculators, knowledge base) cost us almost nothing and build the daily habit, so they stay free forever, that is our acquisition engine. We charge for AI compute, imaging, per-patient services, and multi-user hospital workflow.

1 · Meter by rupee, not by count

- A text answer costs ₹0.03; an imaging read ₹0.40; a voice consult ₹3-5.
- Caps are worst-case ceilings, typical use is ~15% of the cap.

2 · Every tier profits after 18% GST

- Price always exceeds maximum AI exposure.
- Heavy per-patient use is quota + token metered, never flat-unlimited.

3 · B2C is the funnel, hospitals are the revenue

- Cheap individual tiers capture doctors.
- Doctors carry us into their hospital (land and expand).

Never hard-block a safety warning (drug interaction, renal/QT, critical value). It is ethically required and it builds the trust that sells the paid tiers.

B2C · WEB + APP

Individual plans

Free

~~₹0~~

- Reasoning engine, antibiotics, drug DB + safety
- All calculators, KB, guidelines
- Onco reference + CTCAE/RECIST/interactions
- 1 signed-in device (anti-sharing)
- Daily taste of MaiK AI

Trainee

~~₹399~~ **₹199/mo**

Student / Intern / Resident (verified)

- Full MaiK text AI
- Voice dictation
- Educational content + Learn atlases

Co-Resident

~~₹999~~ **₹299/mo**

2 accounts, shared AI pool

- Everything in Trainee, x2 logins
- 4 imaging reads/day each
- "Split it with your co-resident"

Pro Most popular

~~₹999~~ **₹599/mo**

₹4,999/yr · practising doctor

- MaiK + imaging AI 5/day
- Patient Summary, Research
- Up to 2 personal clinics
- Device Voice Ultra · Lab Watch + wearable

Physician (was "Ultimate")

~~₹2,499~~ **₹1,499/mo · ₹14,999/yr**

Run your own clinic. Everything in Pro, plus:

- My Clinic backup to **your own Google Drive** (we store no PHI)
- **Unlimited** Clinic Billing · imaging 15/day · text AI ₹15/day · Device Voice Ultra
- FollowCare 10 pts/mo · MaiK Scribe/voice consult 40/mo · MaiK Ask 40/mo (tokens beyond)
- Up to 4 personal clinics (extra ₹100/mo each)
- Oncology (OncoTree + ONCQIS) optional add-on +₹89/mo

Physician Pro Premium

~~₹3,999~~ **₹2,499/mo · ₹24,999/yr**

We host your clinic, no limits. Everything in Physician, plus:

- **Cloud Sync, we host your records (PHI)**, realtime multi-device
- More AI: text ₹25/day · imaging 30/day · priority reasoning model
- FollowCare 25 pts/mo · Scribe 120/mo · MaiK Ask 150/mo (tokens beyond)
- Up to 6 personal clinics (extra ₹100/mo each) · 2 devices
- **OncoTree + ONCQIS included** · dedicated support

Trial: 14 days (7 after the cutover), no card required, auto-drops to Free. **Over any cap or quota:** top up **AI Tokens** (see next page), upgrade, or wait for the daily reset. No hard lockout, ever. **Prices shown are launch pricing** (regular struck) - genuine intro offers, not fabricated MRP.

Per-patient AI is metered separately

Text AI runs off the daily rupee cap. The expensive per-patient services get their own monthly quota because they cost real money each time, so a high-volume clinic can never invert the tier.

Service	Cost to us	Margin check (net of GST)	Physician	Physn Pro
MaiK text answer	₹0.03	Price / mo	₹1,499	₹2,499
Imaging read (FundX/KardioX/ThoreX/SknX)	₹0.35-0.50	Net after 18% GST	₹1,270	₹2,118
Voice dictation (on-device Whisper)	₹0.00	Worst-case included AI cost	₹460	₹1,130
AI voice consult / MaiK Scribe	₹3-5 / patient	Contribution	₹810 (64%)	₹988 (47%)
FollowCare (1 call + 7-day SMS)	≈ ₹20 / patient	Quotas cap our exposure; anything beyond is paid by the doctor via credits, so margin only improves with heavy use.		
- call ₹4/min x 3-5 min = ₹12-20 · SMS ₹1 x7 = ₹7				

B2B · SALES-LED

Hospital licensing, two simple steps

Step 1 Pick size (beds set the seats)				Step 2 Pick the AI plan (per seat / month)		
Tier	Beds	Min seats	Vol. disc.	Plan	/seat	Includes
Clinic	1-25	3	-	Credits-base	₹399	Platform + shared AI wallet (pay-as-you-go)
Community	26-100	15	10%	Pro	₹799	+ ₹15/seat/day pooled AI, imaging fair-use
Secondary	101-300	40	20%	Ultimate	₹1,499	+ all imaging, Connect, FollowCare, white-label, support
Tertiary	301-750	100	30%			
Enterprise	750+	custom	35%+			

Every seat includes the team platform: ICU workstation, OPD Queue + EMR, Ward Sync, antimicrobial policy overlay, oncology treatment-plan execution, admin console. **Institution coupons** let a hospital pay for its doctors (each redeems a code; revocable anytime).

Public site shows only "**Hospitals & Institutions - Talk to us**". Sales prices from beds, seats, modules, integrations and SLA. Example: Community, 15 seats, Pro = 15 x ₹799 x 0.90 ≈ **₹10,786/mo**.

Connect interoperability (FHIR/HL7/DICOM/ABDM)	H

FINANCE GUARDRAILS

AI cost discipline (why we cannot go bankrupt)

- Daily text-AI caps (₹/day):** Free 0.5 · Trainee 5 · Co-Res 6 pooled · Pro 10 · Physician 15 · Physician Pro 25. Set so under 5% of paying users ever hit them.
- MaiK Tokens (the in-app AI currency):** the user **never sees rupees for AI usage, only MaiK Tokens**. Peg 2,000 MT = ₹1, so ₹10 of AI shows as **20,000 MaiK Tokens**; daily allowance shown in MT (Pro 20,000/day). Top-up packs (₹ only at purchase): **50,000 MT ₹49 · 250,000 MT ₹199 · 750,000 MT ₹735 ₹499**. A big, spendable balance beats "₹25 of AI for ₹50"; every pack profits (~1.3-2x). One wallet powers all overage.
- Per-patient AI** (voice consult, FollowCare) is quota + token metered, never flat-unlimited.
- On-device voice dictation** costs us ₹0, a real edge versus per-minute scribe competitors.
- Live tuning:** the AI Control Center shows per-user daily cost, so caps are tuned from real hit-rates with no redeploy.
- Target:** AI cost of goods stays under 25% of revenue on every tier.

LAUNCH OFFER

Founding Doctor: first 500 doctors, ₹399 for the whole year.

A fixed annual AI token pool ($\approx$ ₹240/yr cost ceiling), then top-up token packs. Profitable even at full use ($\sim$ ₹150/yr, 38% margin). A controlled land-grab that seeds 500 loyal advocates; they roll to Pro ₹599/mo at renewal. Public countdown drives urgency.

MERCHANDISING RULES

- **Every price shows a struck anchor** (launch vs regular, annual vs monthly $\times 12$, token bulk vs entry rate) so it reads as a saving. Anchors must be **genuine**, never a fabricated MRP (India ASCI/CCPA).
- **Referral:** refer a doctor, both get **bonus tokens** (e.g. 5M) on activation.
- **Coupons work on Android + Web only.** Apple forbids external codes in IAP, so the coupon field is hidden on iOS; iOS uses Apple Offer Codes or "redeem on stewardmd.in" (buy on web, entitlement syncs to the account, unlocks the iOS app).
- **GST:** no startup waiver exists, but there is **no GST below ₹20L turnover** (higher early margin), then 18% (Regular + input credit) once registered. B2C prices GST-inclusive; B2B ex-GST + invoice. Confirm with a CA.
- **App-store cuts:** Apple/Google take **15%** (startup programs; 30% above $\sim$ \$1M/yr). **Web checkout has no store cut ($\sim$ 2% only)**, so steer purchases to web; iOS subs must use IAP (budget 15%). Every tier stays profitable at 15%.
- **Personal clinics:** none for Free/Trainee/Co-Res · Pro 2 · Physician 4 · Physician Pro 6 · beyond = **₹100/clinic/mo**.
- **Signed-in devices (anti-sharing):** 1 per account for all tiers, except Co-Resident 2 and Physician Pro 2. Enforced server-side on sign-in.

How we grow

Positioning

The clinical operating layer for doctors and hospitals, not "an AI scribe". From thinking through a case, to deciding, documenting, the patient record, follow-up and hospital workflow.

Think (Free) → Learn (Trainee) → Practice (Pro) → Run your clinic (Physician) → Without limits (Physician Pro) → Run care (Hospital)

Who we target

- **Residents / trainees** - volume + virality, carry us into hospitals
- **Practising physicians** - core B2C revenue (Pro, Physician)
- **Hospitals 50-500 beds** - the revenue tier, landed via doctors already inside

SEO prerequisite: the app is behind a private gate today, so search engines cannot index it. Ship a public, crawlable content site (/learn, /drugs, /calculators) with an "Open in app" call to action, that is step one of growth.

Channels, cheapest first

1. **Community / word of mouth** - resident groups, colleges (₹0-50 CAC)
2. **App-store optimisation** - "MELD calculator", "antibiotic dose", high intent
3. **Programmatic SEO** - thousands of drug / calculator / guideline pages that capture Google searches (the compounding moat)
4. **KOLs, colleges, CME, conferences**
5. **Referral loop** - refer a doctor, both get ₹150 credits
6. **Paid ads** - last, and small, only after LTV:CAC is proven

Unit economics (Pro)

Metric	Value
Gross margin (typical)	~80%
Lifetime value (18 mo)	~₹8,600
Target blended CAC	< ₹2,000
LTV : CAC	> 4
Mid-hospital ACV	₹1.3L - 5.8L / yr

Funnel targets

Stage	Target
Activation (clinical action in 24h)	> 40%
D7 / D30 retention	35% / 20%
Free to paid	4-6%
Trial to paid	> 25%
Referral coefficient (k)	> 0.3

North-star: Weekly Active Clinicians completing a clinical action.

The first 90 days

Weeks 0-2 · Prepare

- Wire prices + payment; do a real test purchase
- Stand up the public SEO content site + 50 seed pages
- App-store optimisation, analytics, referral, Founding offer

Weeks 2-6 · Soft launch

- 3-5 resident communities + 1 college department (free)
- Turn on referral + Founding offer
- Fix the biggest activation drop-off; collect testimonials

Weeks 6-12 · Scale

- SEO to 500 pages; weekly content
- First hospital pilots via institution coupons
- Launch annual plans + win-back

ACTION

Owner decisions to confirm: Physician Pro at ₹2,499 · trial cutover date · free-vs-paid feature list (built, list pending) · payment credentials. Then: payment test-purchase → flip enforcement. Everything else (roles, caps, credits, coupons, admin, IAP) is already built and inert behind the launch promo.
